Hello Team!

As a progressive professional in the fast-paced design world, I thrive on being creative while maintaining the message intended. My drive to provide ingenious solutions and deliver them in various styles is unmatched. I work with various platforms such as print, motion graphics, and website building. My experience is innovative in trademark design and logotype development. I aim to design and promote an identity for a company while remaining versatile through my art. I am detail-oriented, client-focused, and deadline-driven, providing various solutions through visual versatility.

Structure comes effortless for my standard of quality. From multi-page to single print layouts including brochures, posters, calendars, advertisements—you name it, I can deliver! My use of typeface selection and visual development through the Adobe Suite design software applications, including After Effects motion graphics, gives me the flexibility to portray a certain identity. I have raw coding knowledge of HTML, and CSS and have worked with BBEdit, Fetch, and WordPress platforms for multiple of years.

I maintain the ability to be highly collaborative with a team through my communication, design, and artistry skills or work completely independent of supervision and stay constant and cohesive. I am enthusiastic about my career by always seeking new information. I see the market through a different lens allowing me to expand to different design standards.

Thank you for your interest in my attributes. I look forward to hearing from you. Please feel free to contact me if interested in any more information about my skills.
